CANDI-CALM FORMULA

This product provides a blend of nutrients, fatty acids, potent botanicals and essential oils that promotes healthy microbial balance and immune support. Formulated with the goal of building a healthy gastrointestinal (GI) flora, this product includes biotin, a nutrient that inhibits yeast from converting into the more aggressive fungal form, as well as fatty acids like undecylenic and caprylic acid to disrupt the metabolism of candida and create a hostile environment for colonization. It also utilizes potent botanicals, such as berberine, Pau D'arco, oregano, rosemary, cinnamon and ginger, to soothe the GI tract, provide potent antioxidant support and ensure microbial balance.

Overview
Gastrointestinal health is directly affected by factors like poor diet and a stressful lifestyle. The prevalence of refined sugars and carbohydrates and lack of fiber in modern diets have been directly linked to changes in the intestinal and colonic environments.[1] Since more than 70% of the body’s immune system resides in the gut, establishing a healthy microbial balance is critical in reducing immune challenges and maintaining inflammatory balance.

Biotin†
Biotin is a water-soluble vitamin and co-factor for carboxylases. The nutrient affects several key systemic functions such as tissue growth, development, immunity and metabolism. Deficiencies in biotin have also been linked with mild immune impairment.[2] Biotin establishes microflora balance in the GI tract by preventing yeast, especially Candida albicans, from converting to its more invasive fungal form. In the presence of biotin, yeast is unable to change into the mycelium form.

Oregano†
Phytonutrients from oregano, such as rosmarinic acid and quercetin, have been shown to play a role in supporting antioxidant mechanisms and healthy microbial balance in the body.[3,4] In addition, the high ORAC (oxygen radical absorbance capacity), on a scale developed by scientists at the National Institute of Aging) value of oregano, indicates its significant antioxidant-scavenging capacity to combat free radicals that cause oxidative stress. Oregano oil also contains two naturally occurring microbial balancing agents, named carvacrol and thymol. Research suggests that these compounds relieve GI dysbiosis and promote a healthy GI microflora.

Pau D’Arco†
The inner portion of the Pau D’Arco bark has been used by Native Americans for thousands of years to support intestinal microbial health.[5] The botanical has been shown to be effective in promoting healthy intestinal flora and is recommended by herbalists for a wide variety of GI challenges. Studies have shown that Pau d’Arco may also balance musculoskeletal inflammation[6] and invitro studies have shown fractions from Pau D’Arco support microbial balance.[7]

Zinc Undecylenate†
Undecylenic acid has been used to support microbial and immune balance in a variety of different microbial challenges.[8,9] Studies show undecylenic acid to inhibit morphogenesis of Candida albicans; the compound also appears to interfere with fatty acid biosynthesis, inhibiting germ tube (hyphae) formation and disrupting the pH in yeast cells.[10] Of the medium chain fatty acids, undecylenic acid has also been
shown to provide strong support for microbial balance and is approximately six times more potent than caprylic acid.\textsuperscript{[11]}

**Sodium Caprylate**\textsuperscript{†}
Sodium caprylate is the stable sodium salt of caprylic acid, a fatty acid found in coconuts. In vitro studies show that sodium caprylate inhibits aerobic and anaerobic growth, provokes loss of cytoplasm organization and organelles, inhibits budding, triggers potassium loss and is destructive to the cellular integrity of *Candida albicans*.\textsuperscript{[12,13]} Caprylic acid has been shown to contribute to microbial balance\textsuperscript{[14]} and to increase cell telomere size to a desirable 750 ng BDORT.\textsuperscript{[15]}

**Berberine HCl**\textsuperscript{†}
An alkaloid extracted from plant roots, berberine has been found to express strong microbe balancing activity in vitro, and was found to be the best of four agents studied in inhibition of *Candida albicans*’ adherence to HT-29 epithelial cells. Berberine was also found to inhibit SAP (secreted aspartyl proteinases) activity by 70.2% +/-6%, a marker of yeast conversion to the aggressive fungal form.\textsuperscript{[16]} In one in vitro study, mice given 1 mg/kg body weight of berberine saw an increase in microbial balance\textsuperscript{[17]} and displayed synergistic effects with fungal balancing agents.\textsuperscript{[18]}

**Rosemary**\textsuperscript{†}
The essential oil of rosemary has been shown to exhibit broad-spectrum microbial balancing effects. The oil was analyzed in vitro microbial balancing and antioxidant was found to have strong activity.\textsuperscript{[19]} Rosemary extract has also been shown to decrease oxidative stress in various tissues.\textsuperscript{[20]}

**Cinnamon Bark Extract**\textsuperscript{†}
In an in vitro study looking at different strains of microbes, including MRSA and *Candida* species, the essential oil of cinnamon showed consistent ability to maintain microbial balance.\textsuperscript{[21,22]} In vitro research has shown that cinnamon extract causes a change in cell morphology, destruction of organelles and cellular burst in microbes.\textsuperscript{[23]}

**Directions**
2 capsules three times per day or as recommended by your health care professional.

**Does Not Contain**
Gluten, corn, yeast, artificial colors and flavors.

**Cautions**
Do not consume this product if you are pregnant or nursing. Consult your physician for further information.
